EXECUTIVE SUMMARY

Proactive AI & Data Science undergraduate who combines analytical thinking, technical skills, and team leadership to turn ideas into data-driven solutions. A keen observer with a focused and analytical approach to understanding complex datasets and uncovering actionable insights. Naturally curious and committed to continuous learning, with a proactive mindset toward exploring emerging technologies and innovative analytical techniques. Dedicated to transforming data into meaningful business value while maintaining accuracy, quality, and strategic thinking. Demonstrated leadership by taking initiative in forming and managing project teams, fostering collaboration, and driving projects toward successful outcomes. Strong communication and team management skills enable effective collaboration in dynamic environments.

TECHNICAL SKILLS

- Programming: **Python, Java**
- Data Visualization: **Matplotlib, Seaborn, Power BI**
- Data Analysis: **Microsoft Excel, NumPy, Pandas, Scikit-learn**
- Database management: **MySQL, MongoDB**
- Development tools: **Git, GitHub, Docker, Kubernetes**

ADDITIONAL SKILLS

- Reporting
- Documentation
- Figma Design
- Prompt engineering

PROJECTS

AI-Based Crowd Detection and Monitoring System

- Designed an AI-powered crowd monitoring system that leverages drone surveillance and computer vision to detect crowd density, monitor movement patterns, and support real-time public safety management.
- Applied image processing and object detection techniques to estimate crowd density, identify high-risk zones, and provide analytical insights for efficient crowd control and emergency response.
- Proposed a modular drone-compatible architecture with a custom ESP camera module to enable flexible deployment across different drone platforms, enhancing scalability and cost-effectiveness.
- **Tech Stack:** Python, OpenCV, Computer Vision, ESP32-CAM, Drone Camera, Streamlit, Docker

Inventory Management & Sales Analytics System

- Designed and developed a relational database using MySQL to manage products, suppliers, customers, inventory, and sales transactions while applying normalization, JOINS, aggregate functions, and stored procedures for efficient data management.
- Performed SQL-based business analysis to generate insights on inventory status, sales performance, customer purchasing behavior, regional trends, and product profitability through optimized queries.
- Developed an interactive Power BI dashboard featuring KPIs, sales trends, inventory tracking, revenue analysis, product-wise profitability, and dynamic filters to support data-driven business decision-making.
- **Tech Stack:** MySQL, SQL, Power BI, Microsoft Excel, Docker

EDUCATION

Peri Institute of Technology

B.tech in Artificial Intelligence and Data Science - 8.67 CGPA

2023 - 2027

St.Bede's Anglo Indian Higher Secondary School

12th - 83%

2022 - 2023

CERTIFICATIONS & ACHIEVEMENTS

- **Emerging talent Award** by Peri Institute of technology - 2024
- **Runner-Up :** SQL Code Off conducted by Easwari Engineering College
- **Runner-Up :** Tech battle conducted by SRM Institute of Science and Technology
- **3rd** - Pixel Memo conducted by Peri Institute of Technology
- **IIC Regional Meet Hosted by St.Joseph's Institute of Technology**
- **Introduction to Cybersecurity by Cisco**
- **AWS AI Practitioner Challenge**

Participated in 24hr hackathon conducted by SIMATS

- Developers often use devops tools for manage project by collaborating with peers. This AI Agent enables users to command via speech which uses NLP techniques to convert speech to commands for pushing and pulling the repositories
- **Tech stack:** Tkinter, Python, Github API, NLTK, Speech Recognition

Participated in 24hr hackathon conducted by St.Joseph's College of Engineering

- A unified platform for visualizing job market trends, live blogs for courses and concepts, connect with peer mentors, customized career path, Q/A chatbot etc
- **Tech stack:** HTML, CSS, JavaScript, Node.js, Ollama API, etc
